**SKIN BRIGHTNESS**  
**SKIN HYDRATING**  
**SKIN LIFTING**  
**SKIN REPAIR**  
**SKIN VOLUMING**

**Pharmtech**  
BEAUTY INNOVATION

# LeVair Even Better Radical Brightening Triple Booster

Introducing a new line of biostimulating gels that harness the power of Vitamin C, Glutathione, Tranexamic Acid, and a thermal hybrid hyaluronic acid complex for enhanced skin brightening and protection.

This pure gel is highly viscoelastic, injectable, and completely resorbable. Thanks to its unique biochemical properties, LeVair Even Better Radical Brightening Triple Booster elevates skin radiance and tone to new heights.

This Skin Booster is **formulated with a high-performance** blend of actives to target **dullness, uneven tone, and pigmentation**. Vitamin C 5% revitalizes the complexion with antioxidant protection, while Glutathione 12% powerfully combats oxidative stress and brightens skin from within. Tranexamic Acid 12% works to reduce dark spots and discoloration, helping achieve a more even tone. Succinic Acid 13% supports collagen synthesis and balances oil for smoother texture, while Dual Hyaluronic Acid 4% delivers **intense hydration at multiple skin layers, leaving the skin luminous, plump, and refreshed**.

VITAMIN C  
5%

GLUTATHIONE  
12%

TRANEXAMIC ACID  
12%

H-HA & L-HA  
4%

SUCCINIC ACID  
13%

# Composition

## 1<sup>st</sup> Vial

### DESCRIPTION

Lyophilized powder Vitamin C,

### COMPOSITION

Glutathione, Succinic Acid,  
Niacinamide, Mannitol

### VOLUME

120 mg

### USAGE

Mix and dissolve the 1st powder vial and  
the 2nd liquid vial and apply to the skin

## 2<sup>nd</sup> Vial

### DESCRIPTION

Transparent liquid

### COMPOSITION

H-HA & L-HA Complex

### VOLUME

5ml x 1ea

### USAGE

Mix and dissolve the 1st powder vial and  
the 2nd liquid vial and apply to the skin

# Key Ingredients

## 1. Vitamin C

1. Inhibiting Melanin Production: Reduces melanin synthesis by blocking the enzyme tyrosinase.
2. Antioxidant Properties: Neutralizes free radicals, improving skin health and tone.
3. Sun Protection: Boosts the skin's defense against UV damage, helping to prevent pigmentation.

## 2. Glutathione

1. Glutathione is a tripeptide composed of three amino acids: glutamic acid, cysteine, and glycine.
2. It is an important ingredient used in all cells and tissues of the body and is a natural antioxidant created to protect cells, tissues, and organs in our body from free radicals and oxidative stress.

## 3. Tranaxmic Acids

1. Inhibition of Melanin Production: It reduces melanin synthesis by inhibiting the activity of tyrosinase, the enzyme responsible for melanin production.
2. Blocking Melanocyte Activity: Tranexamic acid interferes with the communication between melanocytes (the cells that produce melanin) and keratinocytes (skin cells), which helps diminish excessive melanin production.
3. Anti-Inflammatory Properties: It reduces inflammation, which can contribute to hyperpigmentation. By calming the skin, tranexamic acid helps prevent post-inflammatory hyperpigmentation.
4. Stabilization of Blood Vessels: Tranexamic acid may also strengthen blood vessels, reducing redness and discoloration associated with conditions like rosacea.

## 4. Succinic Acid

1. Cellular Energy Production: Succinic acid is essential for cellular energy production, supporting skin cell regeneration and repair.
2. Antioxidant and Anti-inflammatory Properties: It helps protect skin cells from damage by neutralizing free radicals and reducing inflammation.
3. Collagen and Elastin Support: Succinic acid indirectly supports collagen and elastin production, contributing to improved skin elasticity.
4. Antimicrobial Benefits: It may offer antimicrobial properties, aiding in the management of certain skin conditions.

## 5. Dual Hyaluronic Acids

1. The technology focuses on enhancing skin health through bio-remodeling, stimulating collagen and elastin production. Utilizing the proprietary HILLO® Hybrid cross-linking technology, it improves moisture, elasticity, tone, and texture, while reducing wrinkles and increasing volume. This safe and effective method remodels multi-layer skin tissue for overall skin improvement.
2. It combines H-HA (1,000-1,400 kDa), which hydrates the skin, and L-HA (80-250 kDa), which stimulates skin cell receptors to counteract skin laxity and improve and restore firmness.

# How to Use

## With MTS:

In areas with thin and normal skin, use a 2.0 mm depth in a constant gentle motion without applying force. In areas with enlarged pores, use a 1,5- 2.0mm depth while applying measured force.

Combination with Microneedling RF/Fractional Laser Resurfacing/Plasma Pen:

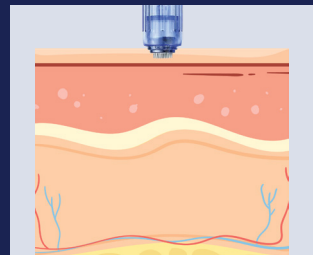

- Apply topically over the entire face and neck after performing the treatment using the medical device
- Gently massage any residue into the skin. Papules usually disappear after 24 hours.

Applicator

Applicator in use

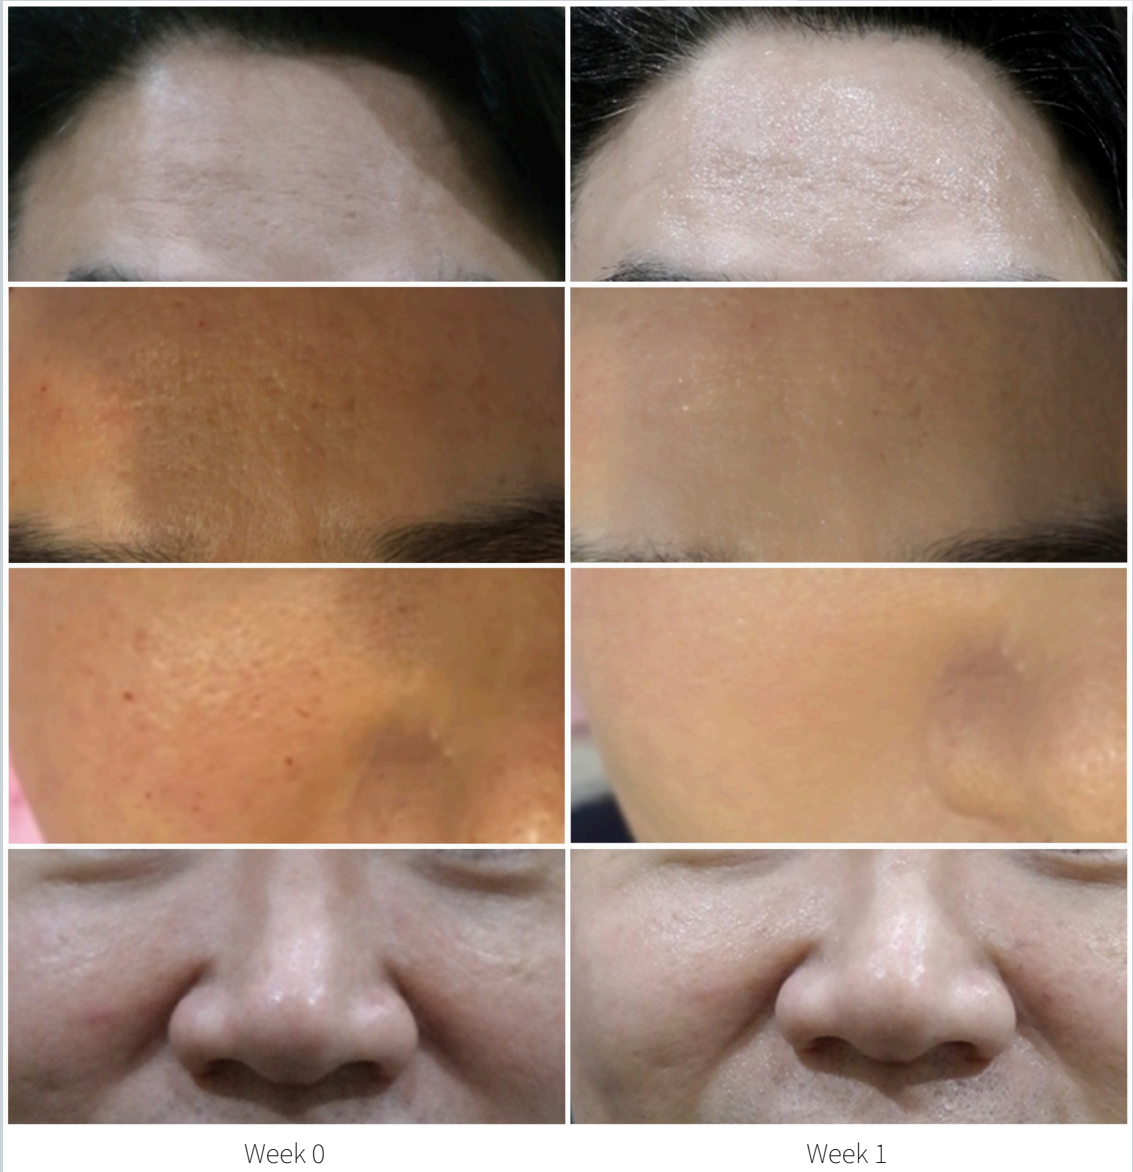

Absorbed into skin

The product pierces the skin layer and spreads evenly for better absorption.
